

# Man in the Middle

Victor Avendano

# Vulnerable Software/Language

Often target browsers

Specifically, they target online shopping sites, banking sites, and other sites that require use of money and login information

# Vulnerability

Dependent on the user

Spyware pretends to be a site that user frequents and obtains their information once they login

# Exploit

Obtains information gathered from the user

Relates to money or password

Can be used to intercept private messages

# Timeline

Earliest mention of “man in the middle” is in November 1973 by Larsen, Gerald H
